## Acknowledgements

This project involved extensive work, research and dedication. I express my deepest appreciation to all those who helped me in completing this report.

First, I am thankful to FINA for its financial support and to FINA TSSC for providing the necessary guidance concerning the implementation of this project.

Second, I express my gratitude towards the members of this Ad Hoc Committee-Judith McGowan (Original Member and Editor of Interim Report 2015), Barbara McNamee (Technical Editor of Interim Report 2015), Jennifer Gray (Original Member), Mikael Begon (Biomechanist), Koji Ito (Biomechanist) and Sonia Hercowitz (FINA TSSC Coach Sub-Committee) - for their kind cooperation and encouragement that helped me complete this project. Without their excellent knowledge and experience, the project would have had inferior outcomes; hence, their support has been essential.

Yours faithfully,

Miwako Homma
Chairman of FINA Ad Hoc Committee on Degrees of Difficulty (2014-2017)
FINA Technical Synchronized Swimming Committee member
September 2017

## 1. Summary of Interim Report July 2015

- Degree of Difficulty Meeting (January 17-22, 2015, Windsor Meade, USA)

### 1.1 Background

The Final Report of the Ad Hoc Committee on Degrees of Difficulty was presented at the FINA Worldwide Seminar on Synchronized Swimming in 1997 in Bangkok, Thailand. A subsequent meeting was held in Tokyo, Japan to address the degrees of difficulty of the many new figures and especially those using explosive movements and dynamic height. Since the FINA Technical Synchronized Swimming Committee and the synchro world has "lived with" the recommendations of the report for 18 years, it was felt by many that it was now time to review the two reports and to clarify any existing concerns regarding the degrees of difficulty of the FINA figures and elements.

A meeting was held at Windsor Meade of Williamsburg, USA, January $17^{\text {th }}-22^{\text {nd }}, 2015$. Interim Report July 2015 was the report of this meeting. Participants at the meeting were:

Miwako Homma, Chairman
Mikael Begon, Biomechanist
Koji Ito, Biomechanist
Jennifer Gray, Original Member
Sonia Hercowitz, TSSC Coaches’ Committee
Judith McGowan, Original Member and Editor
Barbara McNamee, Technical Editor

### 1.2 Process

1.2.1 Survey of subjective difficulty ranking in the current Figures and Elements

Prior to the meeting, a survey was sent out to international coaches and judges to get their difficulty ranking of the current FINA List of Required Figures and the FINA elements. The same survey was given also to Japanese judges and coaches. See Fig. 1 and Fig. 2 for the results. The results of these subjective rankings of the degrees of difficulty were analyzed and the relationship between subjective difficulty ranking and the DD of the figures appears in Fig. 3. These results were a valuable start for the committee's discussions and work.

### 1.2.2 Key point of this meeting

The committee listed all concerns that needed to be addressed during our meetings. The following concerns were identified.

- Key movements are not valued enough
- The existing formula is okay, but the application of it is not always consistent, especially in pass through movements such as in the Flying Fish
- Judges and coaches do not always interpret things the same way; there is a need for clarity - example speed, rapid, acceleration
- Terminology is too open to interpretation
- Too much "stuff" in free routines with no guidelines for judging
- Often get requests for "how much" to take off for specific errors, no deduction system exists

Initially the committee worked as a group to identify any new transitions, or missing ones, that needed to be included in the committee's work. The group also discussed at length the transitions that seemed peculiar and/or at odds with popular opinion.

### 1.3 Reviewing the ESSE (Essential Synchro Specific Elements)

The group first reviewed the values of The Essential Elements of Synchronised Swimming (ESSE) which are used to calculate the degree of difficulty of any given transition.
ESSE contains six components:

1. Sculling Proficiency Values (VSP)
2. Center of Gravity and Buoyancy Values (VGB)
3. Kinesthetic and Spatial Perception Values (VKS)
4. Airborne Weight Values (VAW)
5. Water Resistance Values (VWR)
6. Joint Flexibility Values (VJF)

The committee agreed on the following tables, some of which were revised.

## \#1 Sculling Proficiency Values (VSP)

A sculling proficiency value for sustaining dynamic height was added to the former table.

## \#2 Center of Gravity and Buoyancy Values (VGB)

How the change in the relationship between the center of gravity and buoyancy affects stability The former table remained intact.

## \#3 Kinesthetic and Spatial Perception Values (VKS)

The former table was reformatted and the maximum value was increased from 5 to 7 .

## \#4 Airborne Weight Value (VAW)

The Dynamic Height section and corresponding values were added to the former table.

## \#5 Values of Water Resistance (VWR)

Formula: Drag $=1 / 2 \times$ [water density] x [drag coefficient] x [cross sectional area (CSA)] x [speed of the object] ${ }^{2}$
The former table was totally revised and a formula was used to arrive at these values.

## \#6 Joint Flexibility Values (VJF)

Awarded when required action (not initial position) is beyond normal Range of Movement
The values in the former table remained intact.
The ESSE values in these six tables were used to review all transitions and to make any necessary corrections to them.

### 1.4 Observations

The impact of these modifications and changes become visible when reviewing the Comparison of the Degrees of Difficulty of the Current FINA Figure Groups and Routine Elements.

Of the 24 list figures, 14 ( $58.33 \%$ ) degrees of difficulty changed. Ten figures ( $42 \%$ ) remained the same. Twelve figures ( $86 \%$ ) had a reduction in difficulty with the range being -0.1 to -0.4 , with 2 (14\%) increasing in value.

The impact on the elements was greater with 9 of $15(60 \%)$ elements DD changing. Six of the 15 ( $40 \%$ ) had DD that remained the same. Of the 9 changes, 2 ( $22.22 \%$ ) had reductions, with a range of -0.1 to -0.5 . Seven ( $77.78 \%$ ) had increases. The majority of those increasing in difficulty were spinning elements. This maybe the result of the fact that spins and twists are no longer treated as add-ons.

### 1.5 Group Work

After working on the transitions, two work groups were established. One continued to work on the transitions and completing the DD on some figures. The use of technology made this process much easier. The second group worked on deductions for figures.

Fig. 1 Results of survey on subjective difficulty rank in figures and elements to International coaches and judges ( $\mathrm{n}=13$ )

Fig. 2 Results of survey on subjective difficulty rank in figures and elements to Japanese coaches and judges ( $\mathrm{n}=16$ for fig, $\mathrm{n}=17$ for elem)

Fig. 3 Relationship between subjective difficulty rank and DD in figures.

## 2. Procedures for Determining Degrees of Difficulty

(based on 1997 original DD Report)

Essential Synchro Specific Elements (ESSE) were assigned values. The assessed values are based upon the relative difficulty of each component within a given transition.

### 2.1 Essential Synchro Specific Elements

(1) Sculling Proficiency
(2) Center of Gravity and Buoyancy

- Relationship between Center of Gravity and Buoyancy as it affects stability
- How the change in the relationship between the center of gravity and buoyancy affects stability
(3) Kinesthetic and Spatial Perception
- Kinesthetic awareness - the ability to know the spatial relationships of the body parts
(4) Airborne Weight
(5) Water Resistance
- Resistance as created by buoyancy and/or drag
- Formula: Drag = $1 / 2 \times$ [water density] $\times$ [drag coefficient] $\times$ [cross sectional area (CSA)] $x$ [speed of the object] ${ }^{2}$
(6) Joint Flexibility
- Awarded when required action (not initial position) is beyond normal Range of Movement

### 2.2 Procedure

2.2.1 Determine the numerical value of each transition within a figure or an element

NVT = Numerical Value of a Transition
VSP = Sculling Proficiency Values (Table 1)
VGB = Center of Gravity and Buoyancy Values (Table 2)
VKS = Kinesthetic and Spatial Perception Values (Table 3)
VAW = Airborne Weight Values (Table 4)
VWR = Water Resistance Values (Table 4)
VJF = Joint Flexibility Values (Table 6)
2.2.2 Add the NVT of all transitions:

NV $=\Sigma$ NVT
NV = numerical value of the summation of difficulties of all transitions within the figure or element
2.2.3 Formula:

DD $=N V / K+C$
$\mathbf{K} \& \mathbf{C}$ : constants selected to allow conversion of all NVs to DDs within a selected DD range. For the existing range of NVs (11--158), with a designated DD range from 1.1 to 3.8

K $=54.3$
C $\quad=0.85$
DD = degree of difficulty of a figure or an element

## 3. Values of Essential Synchro Specific Elements (ESSE)

Essential Synchro Specific Elements (ESSE) which are used to calculate the degree of difficulty of any given transition.

ESSE contains six components:

1. Sculling Proficiency Values (VSP)
2. Center of Gravity and Buoyancy Values (VGB)
3. Kinesthetic and Spatial Perception Values (VKS)
4. Airborne Weight Values (VAW)
5. Water Resistance Values (VWR)
6. Joint Flexibility Values (VJF)

Table \#1 Sculling Proficiency Values (VSP)

| Sculling to: | Value |
| :---: | :---: |
| Maintain | 1 |
| Propel | 3 |
| Sustain | 5 |
| Descending and ascending spins | 7 |
| Achieve speed and/or acceleration | 9 |
| Sustain dynamic height | 10 |

Table \#2 Center of Gravity and Buoyancy Values (VGB)
How the change in the relationship between the center of gravity and buoyancy affects stability

| Effect: | Value |
| :---: | :---: |
| Minimal | 1 |
| Moderate | 3 |
| Maximum | 5 |

Table \#3 Kinesthetic and Spatial Perception Values (VKS)

| Movements with: | Value |
| :---: | :---: |
| Minimal | 1 |
| Moderate | 3 |
| Maximum | 7 |

Table \#4 Airborne Weight Value (VAW)

| Base Value | Lifting or <br> Lowering | Holding <br> Leg(S) | Submerging <br> Rising |  |
| :--- | :--- | :---: | :---: | :---: |
|  |  | 3.0 | 2.0 | 0.0 |
|  | To/From Bent Knee | 0.5 | 0.5 | 0.5 |
|  | Bent Knee to/From Ballet Leg | 1.0 |  |  |
|  | 1 Leg Extended | 2.5 | 4.0 | 2.5 |
|  | 1 Leg Extended \& 1 Leg Bent | 3.0 | 4.0 | 3.0 |
|  | 2 Legs Opening or Closing | 5.0 | 5.0 |  |
|  | 2 Legs Extending or Bending | 7.0 |  | 7.0 |
|  | 2 Legs Extended Together | 17.0 | 10.0 | 7.0 |
| Dynamic Height | 2 Legs \& Torso Extended | 15.0 | 15.0 | 10.0 |
|  | 1 Leg \& Torso Extended |  |  | 7.0 |

Table \#5 Values of Water Resistance (VWR)
Formula: Drag $=1 / 2 \times$ [water density] x [drag coefficient] x [cross sectional area (CSA)] x [speed of the object] ${ }^{2}$

| CSA \& Speed: | Value |
| :---: | :---: |
| Small - Moderate | 1 |
| Medium - Moderate | 3 |
| Large - Moderate | 5 |
| Small - Rapid | 2 |
| Medium - Rapid | 6 |
| Large - Rapid | 15 |

Table \#6 Joint Flexibility Values (VJF)
Awarded when required action (not initial position) is beyond normal Range of Movement

| Joint: | Value |
| :---: | :---: |
| Shoulder (s) | 1 |
| Hips Flexion | 2 |
| Spine, Hips Extension | 3 |

## 4. Numerical Value of Transitions (NVT)

The ESSE values in Tables 1-6 were applied all transitions.
Category 1: Airborne - Horizontal Base

| Code | Transition | 1. VSP | 2. VGB | 3. VSK | 4. VAW | 5. VWR | 6. VJF | Total NVT |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1-01 | Back Layout to Ballet Leg (straight) | 5 | 5 | 3 | $3.0+2.5$ |  | 0 | 18.5 |
| 1-02 | Back Layout to Bent Knee Back Layout | 5 | 1 | 1 | $3.0+0.5$ |  | 0 | 10.5 |

## 6. New Figures 2017

From a Back Layout Position, one leg is raised straight to a Ballet Leg Position. From the Ballet Leg Position the vertical leg is bent, without movement of the thigh, to a Bent Knee Back Layout Position. The toe moves along the inside of the extended leg until a Back Layout Position is assumed.

## 142 Manta Ray (description-minor changed)

A Flamingo is executed to a Surface Flamingo Position. With the ballet leg maintaining its vertical position, the hips are lifted as the trunk unrolls while the bent leg moves with the knee at the surface to assume a Fishtail Position. The horizontal leg is lifted rapidly in a $180^{\circ}$ arc over the surface of the water, as it passes vertical, the vertical leg is moved to assume a Bent Knee Surface Arch Position. The bent knee is straightened and with continuous motion, an Arch to Back Layout Finish Action is executed.

## 154 London (new description)

A Ballet Leg is assumed followed by a partial Somersault Back Tuck, as both legs are drawn into a Tuck Position, until the shins are perpendicular to the surface. The trunk unrolls rapidly as the legs are rapidly straightened to assume a Vertical Position midway between the former vertical line through the hips and the former vertical line through the head and the shins. A rapid Vertical Descent is executed.

A Nova is executed to the Bent Knee Surface Arch Position. The bent leg straightens to assume a Knight Position. The body rotates $180^{\circ}$ to assume a Fishtail Position. The vertical leg is lowered to the surface to meet the opposite leg in a Front Pike Position and with continuous movement the body straightens to a Front Layout Position. The head surfaces at the point occupied by the hips at the beginning of this action.

## 308i Barracuda Airborne Split Spin Up 360 ${ }^{\circ}$

A Barracuda Airborne Split is executed to a re-joined Vertical Position. A Vertical Descent is executed at the same tempo as the Thrust to ankle level. The designated Ascending Spin is executed. A Vertical Descent is executed at the same tempo as the Thrust.

| Total |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

From a Back Layout Position, a partial Somersault Back Tuck is executed until the shins are perpendicular to the surface of the water. The trunk unrolls rapidly as the legs are straightened to assume a Vertical Position midway between the former vertical line through the hips and the former vertical line through the head and the shins. The legs are lowered rapidly symmetrically to Split Position. The legs are joined rapidly to resume Vertical Position. A Vertical Descent is executed at the same tempo as the initial actions of the figure.

364 Whirlwind
2.7

From a Front Layout Position a Front Pike Position is assumed. One leg is lifted to a Fishtail Position. Maintaining a Fishtail Position, with the horizontal leg leading toward the vertical leg, two rapid rotations ( $720^{\circ}$ ) are executed. Continuing in the same direction, the horizontal leg is lifted to a Vertical Position as a Continuous Spin $720^{\circ}$ is executed.

## 8. FINA Required Elements for Technical Routines with an assigned degree of difficulty 2017-2021

## SENIOR SOLO

1. Starting in a Submerged Back Pike Position with the legs perpendicular to the surface, a Thrust is executed to a Vertical Position and with no loss of height one leg is lowered rapidly to a Bent Knee Position and as the vertical leg is lowered forward, the bent knee is extended to assume an Airborne Split Position and maintaining maximum height the legs are lifted symmetrically to a Vertical Position, followed by a Vertical Descent. All movements are executed rapidly. [DD 2.7]

|  | Total |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{NVT}=$ | 31.0 | 52.0 | - |  |  |  |  |
| $\mathrm{PV}=$ | 3.16 | 5.31 | - | - | 15.0 |  | 98 |

2. A Dolphin is initiated, and the back continues to arch to assume a Surface Arch Position. The legs are lifted to a Vertical Position. Two Full Twists $\left(720^{\circ}\right)$ are executed, and continuing in the same direction a Continuous Spin $1080^{\circ}$ (3 rotations) executed. [DD 3.4]

|  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

3. 141-Stingray

A Flamingo is executed to a Surface Flamingo Position, travelling head first. With the ballet leg maintaining its vertical position, the hips are lifted as the trunk unrolls while the bent leg moves with the knee at the surface to assume a Fishtail Position. The horizontal leg is lifted in an arc over the surface. As it passes the vertical leg which moves symmetrically, a $180^{\circ}$ rotation is started and is completed as a Split Position is assumed. A Walkout Front is executed. [DD 3.2]

| $\mathrm{PV}=$ | 3.83 | 6.17 |  |  |  |  |  |  |

## SENIOR DUET

1. Starting in a Vertical Position, a Full Twist is executed as one leg is lowered to a Bent Knee Vertical Position. Continuing in the same direction another Full Twist is executed, as the bent knee is extended to a Vertical Position. A Continuous Spin of $1080^{\circ}$ is executed. (3 rotations). [DD 2.3]

2. From a Back Layout Position a straight leg is lifted to a Ballet Leg Position. The shin of the horizontal leg is drawn along the surface to assume a Surface Flamingo Position. The bent knee is straightened to a Surface Ballet Leg Double Position. Maintaining the legs vertical, the body submerges to a Submerged Back Pike Position until the feet are just below the surface. Executing a $360^{\circ}$ rotation the body rises to the surface simultaneously lowering one leg with foot at the surface to assume a Surface Flamingo Position. The horizontal leg is straightened horizontally to a Ballet Leg Position. The vertical leg is lowered straight to a Back Layout Position. Head first travel is allowed during the Ballet Leg sequence. [DD 2.9]

|  |  |  |  | Total |  |  |  |  |

## 9. General Concepts for Deductions in Figures

### 9.1 General Concepts for Deductions in Figures

FINA AS10 states that all judgements are made from the standpoint of perfection.
Judges are asked to consider design: the accuracy of positions and transitions as specified in the figure description. Control: extension, height, stability, clarity, uniform motion, unless otherwise specified in the figure description. (See Appendix IV)
AS 10 states that the competitor can obtain points from $0-10$ using $1 / 10^{\text {th }}$ points
AS 10 states that all judgements are made from the standpoint of perfection of each transition within the figure, which has a numerical value based on its difficulty (NVT). Large, medium, small deductions shall be taken from the percent value of ten (PV) of each NVT as follows:

SMALL DEDUCTION - Deduction 0.1-0.5 points. A small deduction shall be taken when the unique transition follows the description of the figure with minimal deviations of 1-15 degrees.

MEDIUM DEDUCTION - Deduction 0.6-1.5 points. A medium deduction shall be taken when an attempt is made to follow the description of the transition but there are some obvious deviations of 16-30 degrees.

LARGE DEDUCTIONS - Deduction 1.6-3.0 points. A large deduction shall be taken when the transition does not conform to it description by 31 degrees or more.
Deductions for excessive travel or lack of required travel in any transition shall not exceed 0.5 .

Note: A deduction may not exceed the PV of the respective transition.

The FINA Manual for Judges and Coaches outlines how the numerical value of the transition (NVT) and the proportional value (PV) of the transition should be used.
In neither the rules nor the manual is guidance given to the deductions that should be made when the transition does not conform to the transition description.

This paper endeavors to start to discuss the concept of major and minor errors in the execution of figures and elements.

The concepts are complex as rarely does just one error happen e.g. a transition from Bent Knee position to Ballet Leg position may be performed very low, very fast and lacking control, be over the face, the knee not fully extended and also travel headfirst. The judge currently has to decide are these all small/ medium/large errors and cumulatively what deduction should be made. The following are areas to be considered.

## 1. Accuracy of Unique Transitions in a Given Figure

- A unique transition is defined as the movement that distinguishes one root figure from another
- Errors in performance may be deemed to be Large, Medium or Small
- Different levels of deductions must be identified for the 3 categories of error

## 2. Remaining judging Factors for all other elements

- Alignment - the correct, relative stacking of body parts in order to attain a specific position
- Extension -The tension created by contacting muscles to fully stretch the joints and limbs
- Speed - The 3 types of speed are: constant, rapid and accelerating
- Constant refers to the slow or moderate timing that is equal throughout the transition
- Rapid infers fast, swift, quick timing
- Accelerating infers continually increasing the speed throughout the transition
- Travel or lack thereof - movement that is either beyond the requirement of the rules or the lack of movement that is required by rule
- Height - FINA Height charts are used
- Angle of Split - FINA Split angle charts are used

For the concept of Large/Small deductions to work, all transitions will require a list of agreed classifications of errors.

### 9.2 Deduction Guidelines for Figures

The deduction guidelines for Senior and Junior Figures, Age Group 13-14-15 Figures, and Age Group 12 and Under Figures 2017-2021 are shown as follows.

Senior and Junior Figures

| Figure / (unique) <br> transition | Small Deviation | Medium Deviation | Large Deviation |
| :--- | :--- | :--- | :--- |
| Barracuda Airborne Split Spin up 360 |  |  |  |
| Back Pike position | Legs up to 15 degrees <br> from perpendicular | Legs 16 to 30 degrees <br> from perpendicular | Legs 30 degrees or from <br> perpendicular |
|  | Head tucked in in <br> Submerged Back Pike <br> position | Back rounded in <br> Submerged Back Pike <br> position |  |
|  |  | Angle between legs and <br> trunk 46-60 degrees |  |
| Thrust | Legs up to 15 degrees <br> from perpendicular | Legs 16 to 30 degrees <br> from perpendicular |  |

$\begin{array}{|l|l|l|l|}\hline & & \begin{array}{l}\text { Toes out of the water } \\ \text { before the thrust } \\ \text { commences }\end{array} & \begin{array}{l}\text { Toes 6 - 12 inches below } \\ \text { surface before rise }\end{array} \\$\cline { 2 - 4 } \& \& $\begin{array}{l}\text { Toes more than 12 } \\ \text { inches below surface } \\ \text { before rise }\end{array} \\$\cline { 2 - 4 } \& \& $\begin{array}{l}\text { Body rising in pike so } \\ \text { face is at the surface } \\ \text { before unroll commences }\end{array} & \begin{array}{l}\text { Body rising in pike so } \\ \text { part of the face is dry }\end{array} \\$\cline { 2 - 4 } \& Soft knees \& $\left.\begin{array}{l}\text { A hinging, not an } \\ \text { unrolling movement. } \\ \text { Flat back during the } \\ \text { transition }\end{array} \\ \hline \text { Vertical to Split } & & & \begin{array}{l}\text { Knees bending during } \\ \text { thrust }\end{array} \\ \hline \text { Split position } & \begin{array}{l}\text { *Split position using } \\ \text { the angles chart. |  |  | Erratic drops/rises during | Obvious push up at the end of the spin up |
| :---: | :---: | :---: | :---: |
| Aurora Twirl |  |  |  |
| Submerged double ballet leg to knight position | Incorrect timing so that the horizontal leg moves faster than the vertical leg |  | Taking the body down and then rising to full height |
| Twirl | Slightly off balance |  | Loosing balance at the end of the twirl |
|  |  |  | Height dropping to below the knees after the twirl |
|  |  | Slow twirl | Twist more than a twirl |
| Whirlwind |  |  |  |
| Two rapid rotations | Foot of horizontal leg just off the water |  | Water level mid-calf on horizontal leg (foot) clear of the water. |
|  |  |  | $4^{1 / 2}$ rotations, not a continuous motion |
| Continuous spin 720 <br> *Apply rule if rotation not completed or too much rotation |  | Legs joining by end of $11 / 2$ rotations | Legs joined by the end of the first rotation |
|  | Uneven rotation and drop but finishing at correct height |  | Dropping more than $1 / 2$ way down from full height after first rotation |
|  |  |  | Very slow continuous spin |
| Butterfly |  |  |  |
| Fishtail position to Fishtail position | Slow rotation | Stopping and holding the split position | Moving so fast that the rotation starts before the split is achieved |
|  | Horizontal leg swinging/moving up to 10 degrees from position | Horizontal leg swinging/moving between 10 and 30 degrees from position | Horizontal leg swinging/moving more than 30 degrees from position |

| Kipswirl Split Closing 180 |  |  |  |  |
| :--- | :--- | :--- | :--- | :---: |
| Invert tuck to <br> Vertical position <br> (fast) |  | Body straight not <br> rounded during the lift |  |  |
| Vertical Position | Legs/Body up to 15 <br> degrees from <br> Perpendicular | Legs/ Body between 16 <br> and 30 degrees from <br> Perpendicular | Legs/Body more than <br> 30 degrees from <br> Perpendicular |  |
| Split to Vertical <br> Position |  |  |  |  |
| Ipanema | Before lift, Bent Knee <br> up to 15 degrees from <br> perpendicular | Before lift, Bent Knee <br> between 16 and 30 <br> degrees from <br> perpendicular | Before lift, Bent Knee <br> more than 30 degrees <br> from perpendicular |  |
| Surface Arch <br> Position to Vertical <br> Position | Slow rotation to <br> Vertical |  |  |  |
|  | *There should be a <br> section in the height <br> chart specifically for <br> this position |  |  |  |
| Vertical to Front <br> Pike position <br> And/or during the <br> lift to Vertical | Body moving forward <br> up to 15 degrees from <br> Perpendicular | Body moving forward <br> between 16 and 30 <br> degrees from <br> Perpendicular | Body moving forward <br> more than 30 degrees <br> from Perpendicular |  |
| Front pike, rapid <br> 180 degree rotation <br> to vertical | 180 degree rotation <br> starts when feet are off <br> the water | 180 degree rotation <br> starts when legs are <br> almost $1 / 2$ way up to <br> vertical | Legs lifting to almost <br> vertical before the 180 <br> degree rotation starts |  |

## Age Group 13-14-15 Figures

| Figure / (unique) transition | Small Deviation | Medium Deviation | Large Deviation |
| :---: | :---: | :---: | :---: |
| Rio |  |  |  |
| Double Ballet Leg to Submerged Back Pike position | Legs up to 15 degrees from perpendicular | Legs 16 to 30 degrees from perpendicular | Legs 30 degrees or from perpendicular |
|  | Head tucked in in Submerged Back Pike position | Back rounded in Submerged Back Pike position |  |
|  |  | Angle between legs and trunk 46-60 degrees | Angle between legs and trunk more than 60 degrees |
| Thrust | Legs up to 15 degrees from perpendicular | Legs 16 to 30 degrees from perpendicular | Legs 30 degrees or from perpendicular |
|  | Toes out of the water before the thrust commences | Toes 6-12 inches below surface before rise | Toes more than 12 inches below surface before rise |
|  |  | Body rising in pike so face is at the surface before unroll commences | Body rising in pike so part of the face is dry |
|  |  |  | A hinging, not an unrolling movement. Flat back during the transition |
|  | Soft knees |  | Knees bending during thrust |
| Vertical position | Legs up to 15 degrees from perpendicular | Legs 16 to 30 degrees from perpendicular | Legs 30 degrees or from perpendicular |
| Ariana |  |  |  |
| Surface Arch to Split Position | Low throughout movement | Erratic speed and height | Lifting at knee height and then rising in Knight position |
|  | Body forward up to 15 degrees in Split position |  | Leg lifting very quickly and then much slower from Knight position to Split position |
| Rotation from Split to Split | *See an angle chart for splits |  |  |

| Jupiter |  |  |  |
| :---: | :---: | :---: | :---: |
| Fishtail Position to Knight Position | Angle between legs closing or opening from 90 degrees less than 10 degrees | Angle between legs closing or opening from 90 degrees between 11-20 degrees | Angle between legs closing or opening from 90 degrees more than 21 degrees |
| Knight position to Fishtail position | Vertical leg up to 10 degrees from perpendicular | Vertical leg between 11 and 20 degrees from perpendicular | Vertical leg more than 21 degrees from perpendicular |
| Oceanea |  |  |  |
| Surface Arch Position to Vertical Position | Before lift, Bent Knee up to 15 degrees from perpendicular | Before lift, Bent Knee between 16 and 30 degrees from perpendicular | Before lift, Bent Knee more than 30 degrees from perpendicular |
|  | *There should be a section in the height chart specifically for this position |  |  |
| Continuous Spin 720 <br> *Use the rule for not completing the spin |  |  | Slow rotation |
|  |  | Dropping more than $1 / 2$ way from the initial Vertical height by the end of the $1^{\text {st }}$ rotation | Dropping to ankles by end of $1^{\text {st }}$ rotation and rotating at ankles |
| Albatross $1 / 2$ Twist |  |  |  |
| Back Layout to Pike Position |  | Arch to nearly a Surface Arch Position before starting the rotation | Rotating from the surface |
| Pike Position to Vertical Bent Knee Position | Body up to 15 degrees from perpendicular | Body between 16 and 30 degrees from perpendicular | Body over 31 degrees from perpendicular |
| Pike Position to Vertical Bent Knee Position |  | Toe of joining leg below ankle when vertical is achieved |  |
|  |  | Starting to bend the leg so toe of bending leg is at the ankle of extended leg before lift commences | Starting to bend the leg so toe of bending leg is higher than the ankle of extended leg before lift commences |
| Twists |  | Circle of up to $1 / 2$ metre diameter | Circle of $1 / 2$ metre or more diameter |

| Swordtail |  |  |  |
| :---: | :---: | :---: | :---: |
| Surface Arch Bent Knee Position to Knight Position | Foot/leg up to 15 degrees from perpendicular as it is lifted to knight | Foot/leg between 16 and 30 degrees from perpendicular as it is lifted to knight | Foot/leg more than 30 degrees from perpendicular as it is lifted to knight |
| Front Layout Bent Knee Position to Surface Arch Bent Knee Position |  |  | Body piked as the leg is lifted |
|  | *Travel is as per the proposed FINA rule re deductions for travel |  |  |
| Porpoise Continuous spin 720 |  |  |  |
| Front Pike Position to Vertical Position | Body up to 15 degrees from Perpendicular | Body between 16 and 30 degrees from Perpendicular | Body more than 30 degrees from Perpendicular |
| Continuous Spin <br> *Apply rule if rotation not completed or too much rotation |  |  | Slow rotation |
|  |  | Dropping more than $1 / 2$ way from the initial Vertical height by the end of the $1^{\text {st }}$ rotation | Dropping to ankles by end of $1^{\text {st }}$ rotation and rotating at ankles |
| Seagull |  |  |  |
| Inverted Tuck Position to Vertical Position (fast) |  |  | Body straight not rounded during the lift |
| Vertical Position | Legs/Body up to 15 degrees from Perpendicular | Legs/ Body between 16 and 30 degrees from Perpendicular | Legs/Body more than 30 degrees from Perpendicular |
| Vertical Position to Split Position |  |  | Starting the split before the vertical has been achieved |
|  | Split of 150-170 degrees | Split of 120-149 degrees | Split of less than 119 degrees |
| To Vertical Position | Joining split at mid thigh | Joining split at knees | Joining split below the knees |
| Vertical and Vertical Descent | Legs/Body up to 15 degrees from Perpendicular | Legs/ Body between 16 and 30 degrees from Perpendicular | Legs/Body more than 30 degrees from Perpendicular |

|  |  | Descent Fast; not at the <br> same speed as the <br> beginning of the figure |
| :--- | :--- | :--- | :--- |

## Age Group 12 and Under Figures

| Figure/ transition | Small Deviation | Medium Deviation | Large Deviation |
| :---: | :---: | :---: | :---: |
| Straight Ballet Leg |  |  |  |
| Back layout to ballet leg * | Body travels forward or headfirst up to 15 cm (6 in) as leg is lifted | Body travels forward or headfirst more than 15 cm (6 in) as leg is lifted |  |
|  | BL is 15 degrees short of/or beyond perpendicular | BL is 16-30 degrees short of/ or beyond perpendicular | BL is 31 degrees or more. short of/or beyond perpendicular |
|  | Hips drop up to $71 / 2 \mathrm{~cm}$ (3 in) as BL is lifted | Hips drop $10-30 \mathrm{~cm}$ (412 in ) to inches as BL is lifted | Hips drop more than 32 $1 / 2 \mathrm{~cm}$ (13 in) or more as BL is lifted |
|  |  | Shoulders rounded, head is forward | Body sitting in water more than 30 cm (12 in), head off the water |
|  | Knees soft | Knees slightly bent | One or both knees bent 30 degrees or more |
| Ballet leg to Bent Knee Back Layout Position | As leg bends, thigh is 115 degrees from perpendicular | As leg bends, thigh is $16-$ 30 degrees from perpendicular | As leg bends, thigh is 30-45 degrees from perpendicular |
|  | Hips near surface, |  | Hips deep shoulders rounded, head off surface |
| Bent Knee Back Layout Position to Back Layout | Body reaches layout but extension is soft as hips rise to surface, shoulders slightly forward | Body reaches layout but extension is soft as hips rise to surface, shoulders slightly forward | Poor extension through out, body sitting and head is off surface |
| Barracuda |  |  |  |
| Back Layout to submerged Back Pike Position | Legs lifted to mid thigh level pike is near 45 degrees | Below knees is only part of legs lifted and pike is 60 degrees or greater | Buttocks move forward as legs drop below surface without any lift |
| Thrust | Legs up to 15 degrees from perpendicular | Legs 16 to 30 degrees from perpendicular | Legs 30 degrees or more from perpendicular |

|  | Toes 7-12cm (3-5 in) below surface before rise | Toes $15-30 \mathrm{~cm}$ (6-12 in) below surface before rise | Toes more than 30 cm (12 in) below surface before rise |
| :---: | :---: | :---: | :---: |
|  | Legs up to 15 degrees beyond vertical | Legs 1630 degrees beyond vertical | Legs more than 30 degrees beyond vertical |
|  |  | Body rising in pike so face is at the surface before unroll commences | Body rising in pike so part of the face is dry |
|  |  |  | A hinging, not an unrolling movement |
|  |  | Thrust is faster than layout to Back Pike Position but not rapid | Thrust is slow |
| Vertical descent | Legs or torso 1-15 degrees short or beyond perpendicular | Legs or torso 31-45 degrees short or beyond perpendicular | Legs and torso 46 60degrees short or beyond perpendicular <br> 61 degrees short or beyond perpendicular $=$ FAILED |
| Walkover Back |  |  |  |
| Dolphin start to Surface Arch | Feet and legs travel 30 cm (12 in) or less along surface | Surface arch Position not shown | No Dolphin start, head and shoulders press backward to Surface Arch Position |
| Surface arch to split | Body travels forward or headfirst up to 15 cm (6 in.) as leg is lifted | Body travels forward or headfirst more than (6 in) as leg is lifted | Hips drop 31 cm (13 in) or more as leg is lifted |
|  | Low throughout movement Hips drop 7 cm (3 in) or more as BL is lifted | $\begin{aligned} & \text { Hips drop } 91 / 2-30 \mathrm{~cm}(4- \\ & 12 \mathrm{in}) \\ & \text { as leg is lifted } \end{aligned}$ | Lifting at knee height and then rising in knight position |
|  |  | Erratic speed and height | Leg lifting very quickly and then much slower from knight to split or vice versa |
|  |  | Body pauses in Knight Position | Body stops in Knight Position |
|  | Body forward up to 15 degrees from perpendicular in split position | Body forward 16-30 degrees from perpendicular in split position | Body forward 31 degrees or more from perpendicular |

|  | Hips out of alignment 115 degrees from center point of horizontal axis | Hips out of alignment 1630 degrees from center point of horizontal axis torso rotated 16-30 degrees from perpendicular | Horizontal axis between legs in split not parallel to wall, torso rotated more than 31-45 degrees from perpendicular Chinese Split= Failed |
| :---: | :---: | :---: | :---: |
| Split to Front Pike Position | Body forward from perpendicular up to 15 degrees during transition to pike | Body forward from perpendicular between 16 and 30 degrees during the transition to pike | Body forward from perpendicular 31-45 degrees during the transition to pike |
| Front Pike Position to Front Layout Position. | Body hinges upward with minimal foot first travel | Body hinges upward without any foot first travel |  |
|  | Arch in upper back in layout | Head and feet at surface in layout, rest of body below surface |  |
|  | Feet slightly below surface | Feet below surface up to 15 degrees below surface |  |
| Ballerina |  |  |  |
| Front Layout to Submerged Ballet Leg Double | Head and torso move forward and downward with forward travel of buttocks, legs and feet on surface only $16-30 \mathrm{~cm}$ (712in), | Head and torso move forward and downward with minimal forward travel of buttocks, legs and feet on surface, only $1-15 \mathrm{~cm}$ (up to 6 in) | Torso hinges downward and backward to front pike position, no travel forward of buttocks, legs and feet |
|  | Partial somersault is executed using proper axis during rotation | Partial somersault is executed attempting to use proper axis but it moves during rotation | Partial somersault executed with hips as axis |
|  | Pike between 61 and 80 degrees | Pike between 46 and 60 degree | Pike is not 90 degrees but 45 degrees or tighter |
| Submerged Double Ballet Leg Position to Submerged Flamingo Position | As one leg is lowered to Submerged Flamingo Position vertical leg up to 15 degrees short or beyond perpendicular or leg is perpendicular and torso is up to 15 degrees short of or beyond horizontal | As one leg is lowered to Submerged Flamingo Position vertical leg up to 16-30 degrees short or beyond perpendicular or leg is perpendicular and torso is up to 16-30 degrees short of or beyond horizontal | As one leg is lowered to Submerged Flamingo Position vertical leg is 31-45 degrees short or beyond perpendicular or leg is perpendicular and torso is 31-45 degrees short of or beyond horizontal |
| Submerged Flamingo <br> Position to Surface <br> Flamingo Position | Shoulders back, position of legs good and torso is 61-80 degrees from perpendicular leg | Shoulders rounded, torso is 46-60 degrees from perpendicular leg | Shoulders rounded, head forward knee of bent leg too close to chest |

| Position to Bent Knee <br> Back layout Position | Knee of BL is soft as leg as straight leg is lowered to surface | Knee of BL is bent up to 16 degrees as leg is lowered to surface | Knee of BL is bent 17 degrees or more as leg is lowered to surface |
| :---: | :---: | :---: | :---: |
|  | Bent knee arrives at Bent Knee Position just after BL is on surface | Bent knee moves to Bent Knee Position after BL is more than 30 degrees from perpendicular | Bent knee moves to Bent Knee Position after BL is on surface <br> Bent knee is extended to layout as BL is bent to Bent Knee Back Layout Position = Failed |
| Bent Knee Back <br> Layout to Back Layout Position | Body reaches layout but extension is soft as hips rise to surface, shoulders slightly forward | Body reaches layout but extension is soft as hips rise to surface, shoulders slightly forward | Poor extension through out, body sitting and head is off surface |
| Kip |  |  |  |
| Back Layout Position to Inverted Back Tuck Position | As body moves into tuck position head moves off the surface toward knees to assume tuck position | Head and torso move toward feet to assume a tuck position | Head and torso move toward feet to assume a tuck position |
| Inverted Back Tuck position to Vertical Position | Shins up to 15 degrees short or beyond perpendicular | Shins 16-30 degrees short or beyond perpendicular | Shins 31-45 degrees short or beyond perpendicular |
|  | Tuck could be tighter | Head out of line | Knees off chest, head not tucked in |
|  | Body unrolls and legs extend upward simultaneously but vertical attained is slightly in front of or behind midway point described | Legs move to vertical and then back unrolls under legs | Head and back move to vertical legs open at hips (thighs parallel to surface of water and legs straighten to vertical |
|  |  |  | Head leads shoulders backward to open tuck |
| Vertical Descent | Legs or torso 1-15 degrees short or beyond perpendicular | Legs or torso 31-45 degrees short or beyond perpendicular | Legs and torso 46 60degrees short or beyond perpendicular <br> 61 degrees short or beyond perpendicular $=$ FAILED |

| Swordfish |  |  |  |
| :---: | :---: | :---: | :---: |
| Front layout Bent Knee to Bent Knee Surface Arch Position |  | Back flat during the lift | Piking at start of the lift |
|  |  |  | Throwing the leg up. Lifting in 1 count |
|  | *Travel is as per the proposed FINA rule re deductions for travel |  | No lift of the leg, body moving back under the foot |
| Surface Arch Bent Knee Position | Bent Knee up to 15 degrees from perpendicular | Bent Knee between 16 and 30 degrees from perpendicular | Bent Knee more than 30 degrees from perpendicular |
| Swan |  |  |  |
| Back Layout to Bent Knee Surface Arch Position | Minimal head first travel of 30 cm or less | Body arrives in Surface Arch Position just prior to knee bend | No Dolphin start, head and shoulders press backward, Surface Arch Position shown before knee bends |
|  |  | Surface Arch Position not shown |  |
| Bent Knee Surface Arch to Knight Position | Travel forward or backward up to 15 cm (6 in) | Travel forward or backward 16 cm (6 $1 / 2 \mathrm{in}$ ) or beyond |  |
|  | Back and head up to 15 degrees forward or beyond perpendicular | Back and head up to 16 30 degrees forward or beyond perpendicular | Back and head 31 degrees or more forward of perpendicular |
|  | Vertical leg up to 15 degrees short or beyond perpendicular | Vertical leg up to 16-30 degrees short or beyond perpendicular | Vertical leg 31 degrees or more short or beyond perpendicular |
|  | Knee of horizontal leg is soft | Knee of horizontal leg is bent | Knee of horizontal leg is bent 30 degrees or more |
|  |  | Hips are not parallel and horizontal leg turned outward | Hips are not parallel (15 degrees or more) and horizontal leg turned outward with knee cap perpendicular to surface |
| Rotation from Knight Position to Fishtail Position * |  | Horizontal leg moves side to side during rotation | Vertical leg makes a circle during 180 degree rotation toward horizontal leg (off of axis) |
|  | Torso and/or leg arched or piked up to 15 degrees from perpendicular | Torso and/or leg arched or piked 16-30 degrees from perpendicular | Torso and/or leg arched or piked 31-45 degrees from perpendicular |

|  | Extension in fishtail <br> evident but soft |  |  |
| :--- | :--- | :--- | :--- |
| Fishtail to Front Pike <br> Position | Timing a little slower <br> than other transitions | Timing much faster than <br> other transitions |  |
|  | Torso arched or piked 1- <br> 15 degrees from <br> perpendicular | Torso arched or piked 16- <br> 30 degrees from <br> perpendicular <br> Front Pike Position not <br> shown | Torso arched or piked <br> $16-30$ degrees from <br> perpendicular <br> Front Pike Position not <br> shown |
| Front Pike to Front <br> Layout Position | Body hinges upward with <br> minimal foot first travel | Body hinges upward <br> without any foot first <br> travel |  |
|  | Arch in upper back in <br> layout | Head and feet at surface <br> in layout, rest of body <br> below surface |  |
|  | Feet slightly below <br> surface | Feet below surface up to <br> 15 degrees below surface | Torso arched or piked 16- <br> 30 degrees from <br> perpendicular |

|  |  | Rotation about axis on <br> side of body |
| :--- | :--- | :--- |
| Drop spaces and <br> extension of bent knee <br> slightly off | Bent knee fully extended <br> before ankles reach <br> surface | Bent knee fully <br> extended as calves reach <br> surface |
